VictoriaMetrics en Vivo - Valencia Observability Meetup

Oct
2
5:30 PM

📍 C. de la Travesía, Poblados Marítimos, 46024...

Attend on *m*

By Monitoring & Observability
VictoriaMetrics - Valencia

Agenda

1

18:00 - 18:30 Welcome!

2

18:30 - 19:15 Chad Crowell - Multi-Tenant Telemetry at Scale

3

19:15 - 20:00 Networking & Dinner

4

20:00 - 20:45 Kirill Yukov - From HomeLab to Hyperscale: VictoriaMetrics Topologies

5

20:45 - 21:45 Wrap up & Networking

Key Differentiators

10x

Cost Savings

Use far less RAM & disk than alternatives for the same workload

90%

Energy Reduction

Helps reduce energy required for data processing & storage

4x

Network Savings

Cost-efficient network protocol reduces traffic by 4x

30x

RAM Efficiency

Up to 30x less RAM for the same active series (vs alternatives)

15x

Disk Efficiency

Up to 15x less disk space for the same production workload

Simple

Operations

Setup in minutes. Minimal configuration. One binary.

VictoriaMetrics

High performance time series database & monitoring solution

10x

More data, same resources

Easy to configure & operate

Single binary, runs anywhere

High ingest rate

Handles the largest workloads in the world

10x

Less RAM usage

Prometheus-compatible

Drop-in replacement, all PromQL works

Cloud & Kubernetes ready

Docker, Helm, Operator support

20x

More performance

Long-term metrics storage

Built for retention at scale

Open Source forever

1B+ downloads, 1000s of users

VictoriaMetrics Ingestion Protocols

Scraping

Prometheus exposition format

OpenTelemetry

OTel metrics protocol

Prometheus RemoteWrite

Remote write protocol

InfluxDB line

InfluxDB line protocol

Graphite Plain Text

Graphite plaintext

OpenTSDB

HTTP/TCP/UDP

JSON / CSV

Custom data formats

DataDog

DataDog agent protocol

NewRelic

NewRelic ingestion

VictoriaMetrics Query Language (MetricsQL)

MetricsQL

PromQL compatible with 100+ additional functions to improve querying experience

GraphiteQL

Can be used as Graphite datasource in Grafana. Templating support in queries.

LogsQL

Powerful query language for VictoriaLogs with full-text search capabilities

Compatible

Works with Grafana, Prometheus ecosystem, AlertManager, and more

Platforms & Deployment Options

Supported Platforms

Linux

amd64, arm/arm64,
386

Darwin (macOS)

amd64, arm64

Windows

amd64

FreeBSD

amd64

OpenBSD

amd64

Deployment Options

Binaries (single-server or cluster)
Docker images

Snap packages
Helm charts

Kubernetes Operator (vmoperator)
Ansible roles

VictoriaMetrics Cloud (fully managed)

VictoriaMetrics Components Reference

VictoriaMetrics (Single/Cluster) Time series DB. Single-node or cluster. Core product.	<i>OSS + Enterprise</i>	VictoriaLogs (Single/Cluster) Log database. Simple & reliable. LogsQL query language.	<i>OSS + Enterprise</i>
VictoriaTraces Distributed traces database. OpenTelemetry native.	<i>OSS</i>	vmagent Lightweight metrics collector. Push/pull. Stream aggregation.	<i>OSS + Enterprise+</i>
vmalert Alerting rules engine. Prometheus-compatible.	<i>OSS + Enterprise+</i>	vmauth Auth proxy. SSO/LDAP/JWT/mTLS. Request routing.	<i>OSS + Enterprise+</i>
vmbackup / vmrestore Backup and restore utility for VictoriaMetrics data.	<i>OSS</i>	vmbackupmanager Automated scheduled backups. Incremental. Any storage backend.	<i>Enterprise</i>
vmoperator Kubernetes operator for managing VM stack on k8s.	<i>OSS + Enterprise+</i>	vmctl Migration tool. Import/export data between monitoring systems.	<i>OSS</i>
vmgateway Multi-tenant rate limiting and access control gateway.	<i>Enterprise</i>	vmanomaly ML-powered anomaly detection for Metrics, Logs, Traces.	<i>Enterprise</i>

VictoriaMetrics vs Prometheus

2x

Faster queries

2x

Less RAM usage

2.5x

Less storage space

- VictoriaMetrics is horizontally scalable - Prometheus is not
- Natively supports Push with many protocols - Prometheus pull-only by default
- Better long-term retention performance at scale
- MetricsQL is a superset of PromQL - all existing dashboards and alerts work
- See benchmark details [here](#)

Join our Slack

VictoriaMetrics vs Grafana Mimir

1.7x

Less CPU

5x

Less RAM usage

3x

Less storage space

- VictoriaMetrics is much simpler to deploy and manage than Mimir
- Supports Downsampling of historical data (not available in Mimir)
- Retention per label and per series - granular control Mimir lacks
- Stream aggregation on the metrics collector agent level
- See benchmark details [here](#)

VictoriaMetrics vs Datadog

Area	Datadog (bills per host and per metric - costs explode at scale)	VictoriaMetrics
Pricing	Pay-per-host + per-metric, unpredictable	Resource-based, predictable & transparent
Data control	Your data stored in Datadog's cloud	Full data sovereignty — your infra or VM Cloud
Vendor lock-in	Proprietary agents, query language	Open source, standard protocols (Prometheus, OTel)
Cardinality	Strict cardinality limits = extra cost	No cardinality limits — handle billions of series
Support	Tiered, remote team	Direct access to engineers who built it

30x

Less memory usage

15x

Less disk space

50:1

Compression ratio

Key Capabilities

- Powerful LogsQL query language with full-text search
- Schema-less: handles structured & unstructured logs
- Single node replaces Elastic cluster with 30 nodes
- Linear scalability — also available as cluster version
- Multi-tenancy support
- Integrated with FluentBit, Promtail, Logstash, and more
- Cloud, Kubernetes, bare metal, edge deployment

Why teams choose VictoriaLogs

- Easy migration from other solutions
- Cost-efficient vs. Elasticsearch, Loki, Splunk
- Less operational overhead
- Faster root-cause analysis
- Ad-hoc log analysis of large volumes

Join our Slack

VictoriaLogs - Technical Details

Query language	LogsQL — powerful full-text search, filtering, aggregation
Data model	Schema-less. Handles any log shape: structured, unstructured, mixed
Ingestion sources	FluentBit, Promtail, Logstash, Vector, Fluentd, and more
Scalability	Single-node or Cluster. Linear horizontal scaling.
Compression	50:1 compression ratio — store 50× more logs in the same space
Memory usage	30× less than Elasticsearch for same workload
Disk space	15× less disk usage compared to alternatives
Multi-tenancy	Full multi-tenancy support in both single-node and cluster mode
CLI	vlogscli — interactive query tool with history and live tailing
Runs anywhere	Kubernetes, cloud, edge, bare metal

VictoriaTraces

New database for distributed tracing storage and analytics

3.7x

Less RAM than alternatives

Resource-efficient & fast

Handles large trace volumes with minimal resources

OpenTelemetry compatible

Industry-standard tracing protocol support

2.6x

Less CPU usage

Linear scalability

Capacity and performance scale horizontally

High compression

10× compression ratio reduces storage costs significantly

10x

Compression ratio

No additional dependencies

No Cassandra, Elasticsearch, or other backends required

Easy to operate

Same operational simplicity as VictoriaMetrics

How to get started

Open Source · Enterprise · Cloud

VictoriaMetrics Solutions

Open Source

Free forever · Available on GitHub

1. Visit github.com > VictoriaMetrics > VictoriaMetrics
2. Download binary or Docker image
3. Follow quickstart documentation
4. Join community Slack for help

Join our Slack

Enterprise

Commercial licence · On-premise, Cloud or Hybrid

1. Request a quote at victoriametrics.com/plans-features
2. Choose your tier: Launchpad / Silver / Gold / Platinum
3. Our team sets up a trial or POC
4. Onboarding with your dedicated CSM

Cloud

Pay-as-you-go · No credit card to start

1. Sign up at console.victoriametrics.cloud
2. Get \$200 free trial credits (7 days)
3. Deploy Single-node or Cluster in minutes
4. Start ingesting metrics, logs and traces immediately

VictoriaMetrics Enterprise

Reliable, Secure & Cost-Efficient Monitoring at Scale

Enterprise-grade Security

- Mutual TLS
- SSO / LDAP / OpenID / JWT
- CVE vulnerability SLA
- LTS release support
- Backport fixes

Best-in-class Support

- 4 support tiers
- Dedicated CSM for all tiers
- 24/7 available (Platinum)
- Direct engineering access
- Joint Slack channel

Enterprise Features

- Downsampling
- Data retention per label/tenant
- Automated backup manager
- Multi-tenant stats & rate limiting
- Anomaly detection (ML)

More on: <https://victoriametrics.com/contact-us>

Enterprise Key Features

Downsampling

Reduce disk usage by 2–20×. Extend retention period. Improve query speed for historical data. Single command-line argument to enable.

Automated Backup Manager

Easy-to-use tool for regular backups at any interval. Supports all major cloud storage backends. Simple restore workflow.

Data Retention per Label/Tenant

Set retention periods per dataset, label, or tenant. Optimize storage costs. Comply with data access laws and regulations.

Multi-Tenant Stats & Rate Limiting

Monitor ingestion rate per tenant. Detect overloaded components. Alert or automatically throttle per-tenant traffic.

Anomaly Detection (vmanomaly)

ML-powered continuous anomaly scoring. Supports multiple AD algorithms. Works on Metrics, Logs, and Traces.

vmgateway & Access Control

Multi-tenant access control and rate limiting at the gateway level. JWT token verification for tenant isolation.

Get involved with our community

Telemetry Talks and DevEx Talks podcasts

Telemetry Talks is a video series dedicated to deep dives into metrics, logs, and traces, hands-on demos, and real-world troubleshooting tips to help you instrument, scale, and debug OpenTelemetry with confidence.

DevEx Talks highlights the human side of engineering and helps teams build more inclusive, effective and sustainable developer experiences. A vendor neutral podcast.

Some upcoming conferences & talks in Q4 2026 (33 events)

October 5	Observability EU Summit (Prague, Czech Republic)
October 7-8	PromCon EU (Munchen, Germany)
October 15-16	Open Source Observability Day (online)
21 - 22 October	P99 CONF (online)
October 27	Cloud Native Bergen (Norway)
October 30	J On the Beach '26 (Malaga, Spain)
November 1-4	Golab (Italy)
November 18-20	OSMC 2026 (Germany)
